# PADRÃO RACIAL PURUNÃ

Para descrição da raça Purunã, destaca-se definição segundo o estatuto da ACP – Associação de Criadores de Bovino Purunã.

De modo geral, o Padrão Racial Purunã corresponderá aos tipos biológicos indicativos de animais produtores de carne, devendo estes ser bem estruturados e apresentar boa musculatura, características fenotípicas associadas a alto rendimento de carcaça. Além disso, os animais devem ser adaptados às diferentes regiões de clima do país (Figura 1).

Figura 1 – Vista geral de um rebanho de animais Purunã.

O Purunã é um animal dócil e prolífero; apresenta precocidade sexual, bom rendimento de corte, com presença de marmoreio na carne. Os machos apresentam bom desempenho na terminação, tanto em pasto como em confinamento (Figura 2).

Para fins de registro de animais e seleção genética, deverão ser levadas em conta a fertilidade, a conformação e o desenvolvimento ponderal, ficando a ponderação a ser atribuída a cada uma destas características a critério dos inspetores técnicos credenciados pelo SRGRP.

Figura 2 – Reprodutor da raça Purunã.

Sexualidade:

a) Machos:

- I. Cabeça e corpo que denotem masculinidade, devendo ser eliminados animais que apresentem desvio de septo.
- II. Pelo curto e de aspecto lustroso, admitindo-se variações em função da região climática e da época do ano.
- III. Testículos devem ser normais em sua anatomia, mesmo quando avaliados visualmente; o tamanho, medido pela circunferência escrotal, deve atender às recomendações do Colégio Brasileiro de Reprodução Animal, sem prega testicular e com a cauda do epidídimo bem desenvolvida. A boa pigmentação do saco escrotal é desejável.
- IV. Prepúcio deve ser de tamanho médio ou curto, que não ultrapasse a linha imaginária que une os “joelhos” aos “cotovelos” do animal. Serão eliminados os prepúcios em formato de “V”(pendulares) ou mal conformados.
- V. Boca: se apresentar prega dianteira, esta não deve exceder a boca, ao se observar o animal de lado. São desejáveis mucosas internas com tendência a ficarem expostas.
- VI. Aprumos bem implantados, desclassificando-se animais de perna reta (garrões retos) (Figura 3).

Figura 3 – Detalhes de cabeça, pelos, testículos e aprumos dos touros Purunã.

b) Fêmeas:

- I. Cabeça e corpo devem denotar feminilidade. Serão eliminadas fêmeas com desvio de septo.
- II. Pelo curto e lustroso, podendo apresentar variações segundo a região climática e época do ano.
- III. Vulva de tamanho adequado, com tetas de tamanho médio.
- IV. Umbigo médio ou pequeno.
- V. Aprumos: igual aos machos (Figura 4).

Figura 4 – Detalhes de cabeça, pelos, aprumos e úbere das vacas Purunã.

Desenvolvimento e Conformação:

a) Separadamente por sexo, ano de nascimento e grupo de manejo, o desenvolvimento ponderal de cada indivíduo será avaliado em relação à média do grupo contemporâneo e às condições de produção (pasto, confinamento, fazenda), por meio de análises genéticas propostas com vistas à emissão do Certificado Especial de Identificação e Produção (CEIP), cujo índice para qualificação genética (IQG) dos animais será:

$$\text{IQG/Purunã} = 15\% (TM120) + 25\% (P210) + 20\% (TM210) + 40\% (P420),$$

em que TM120, P210, TM210 e P420 são os valores das DEP's para as características Total materno aos 120 dias, Peso aos 210 dias (Efeito Direto), Total Materno aos 210 dias e Peso aos 420 dias (sobre ano) (Efeito Direto).

b) Além deste índice, na seleção dos machos será dada preferência aos animais de maior comprimento e musculabilidade, com maior profundidade no costilhar, características fenotípicas geralmente associadas com maior ganho de peso e melhor desenvolvimento muscular.

c) O padrão de referência para o desenvolvimento ponderal em regime de pasto do Purunã é apresentado na Tabela seguinte:

Característica	Valor de referência (kg)	
	Machos	Fêmeas
<b>Peso aos 120 dias</b>	125	118
<b>Peso aos 210 dias</b>	175	165
<b>Peso aos 365 dias</b>	235	197
<b>Peso aos 540 dias</b>	338	278

Pelagem e Pigmentação Ocular:

a) Nas composições raciais intermediárias de formação do Purunã por cruzamentos absorventes (graus de sangue  $\frac{1}{2}$ ,  $\frac{3}{4}$  e  $\frac{7}{8}$ ) e nas duas primeiras gerações dos animais Purunã são admitidas pelagens de cores e tonalidades variadas.

b) os animais da raça Purunã (composição racial final) deverão apresentar a pelagem variando da branca ou variações do cinza claro ao escuro, também serão aceitos os tons avermelhados. Os animais deverão ter pelo curto e liso.

c) por questões de padronização estipularam-se algumas pelagens que serão aceitas com ressalvas, para os graus de sangue intermediários, onde a diversidade de pelagens é mais aceitável, Branco / Cinza, Cara Branca ou Mascarado, Vermelho com Cara Branca ou Mascarada.

**Serão eliminados animais com manchas pelo corpo e também aqueles com pelagens oveira, jaguané, osca e preta.**

d) Nos animais Purunã, a partir da 3ª geração do composto, tanto machos quanto as fêmeas deverão ter origem conhecida e enquadrar-se nas características e pelagens destacadas pelo Padrão Racial.

f) Mucosa: Deve ser pigmentada nas regiões da boca, do nariz, do úbere e dos testículos.

g) Pelo: Depois de pelechado, na saída do inverno, deve liso, brilhante e sentado no couro; exceção feita aos pelos característicos (púbis, vassoura da cauda, orelhas) e dos diferenciais masculinos (pescoço e cernelha).

h) Couro: Fino e solto no corpo do animal, mas aderido na cabeça e nas extremidades. Desde abaixo do queixo, para trás, apresenta pouca barbela (Figura 5).

Figura 5 – Detalhes de pelagem, pigmentação ocular e mucosas de animais Purunã.

Temperamento: Em ambos os sexos, dócil, porém alerta.

Morfologia: A raça Purunã deverá apresentar indivíduos de físico equilibrado, com boa distribuição de massas musculares, de forma contínua, num corpo retangular, com linhas definidas pelo lombo reto e nivelado, e patas aprumadas.

- 1) Cabeça: Forte e expressiva nos machos; descarnada e leve nas fêmeas; chanfro de comprimento médio, plano, ou côncavo.
  - 1.1) Orelhas: de tamanho médio, providas de pelos internos de proteção, firmes, atentas e com boa mobilidade.
  - 1.2) Olhos: Olhar vivo, mas dócil.
  - 1.3) Chifres: Na variedade aspada, os chifres são simétricos e dirigidos em curva, para a frente e para cima.

- 2) Pescoço: De aspecto cilíndrico nas fêmeas, com a pele ligada; forte nos machos, cheio no cupim.
- 3) Dianteiro: Em volume proporcional ao posterior, sem excessos musculares que destaquem excessivamente as omoplatas do pescoço e do tórax.
- 4) Tórax: Alongado e forte, com linha superior paralela ao solo; distante do chão de modo a permitir, por meio dos membros, uma boa mobilidade do animal.
  - 4.1) Peito: Discreto volume nas fêmeas e pouco profundo nos machos, não ultrapassando a meia distância do comprimento do braço.
  - 4.2) Costelas: Longas e arqueadas, dando volume ao tórax para abrigar os órgãos internos e um bom volume do aparelho digestivo; cobertas por musculatura definida, evitando-se cintura entre costelas e omoplatas.
  - 4.3) Lombo: Longo, nivelado e firme.
- 5) Posterior: Quartos traseiros volumosos, com musculatura naturalmente alongada cobrindo os ossos longos, prevenindo-se contra a formação de “músculo duplo”.
  - 5.1) Quadris: Idealiza-se o animal que visto lateralmente, tenha bom comprimento do osso íliaco, emprestando comprimento aos quartos; visto pela retaguarda, o animal deve mostrar sua maior largura de quartos a meio da musculatura, entre o garrão e a anca; a junção intermédia dos quartos será alta, a nível pouco abaixo dessa maior largura; visto de cima, os ossos das cadeiras devem mostrar tendência a ter a mesma largura, tanto em sua porção anterior como posterior, embora não devam ser largos em demasia, pois deve aparecer mais o músculo do que o osso.
  - 5.2) Inserção de cauda: A cauda cai, desde a sua inserção nos quartos, naturalmente perpendicular ao dorso e a porção posterior do osso da bacia pélvica deve ser de nível inferior ao mesmo em sua porção anterior.
- 6) Aprumos: Patas mediamente longas, de ossatura forte, com boa postura sobre o solo, emprestando segurança à sua sustentação e à sua aparência nobre; devem estacionar sobre o terreno em marcação retangular, perpendiculares ao corpo, sem serem excessivamente separadas, ou demasiadamente juntas. O ângulo do garrões, por isso, não pode ser acentuado, desprezando-se; no entanto, os animais de garrão com ângulo raso.

O padrão racial e as características fenotípicas do Purunã serão anualmente revisados pelo CDT.

Anualmente, o SRGRP publicará um relatório contendo os resultados do Registro Genealógico da Raça Purunã (RGRP), das Provas Zootécnicas realizadas e dos resultados da avaliação genética para emissão do CEIP, em forma de Sumário da raça.

---

O presente padrão descrito foi uma sugestão apresentada para aprovação e homologado durante Assembléia de Fundação da ACP em 10/11/2011 e, em Cascavel-PR

# AGPUR – 2018

## APRESENTAÇÃO - CARACTERÍSTICAS AVALIADAS

As estimativas do valor genético de cada característica avaliada serão apresentadas na forma de DEP (Diferença Esperada na Progenie). Foram geradas DEP's para as seguintes características de interesse econômico:

- **PESO AOS 120 DIAS (FASE MATERNA):**  
O peso aos 120 dias é expresso em kg, indicando o potencial do filhote para atingir bom desempenho à desmama. O efeito materno apresenta forte influência nesta característica, condicionada principalmente pelo ambiente intra-uterino proporcionado ao filhote e pelo período de amamentação. A característica também é influenciada pelo ambiente em que o animal vive. Touros com DEP's elevadas têm maior potencial para gerar filhas que produzirão filhos que possuam peso elevado aos 120 dias.
- **PESO AOS 210 DIAS (DESMAMA):**  
Considerado um dos principais indicativos do potencial produtivo dos bovinos, o peso à desmama é expresso em kg. O mesmo demonstra o potencial de crescimento do bezerro e o efeito materno, apresentando este, importante influência sobre o peso à desmama. O genótipo do bezerro e o ambiente no qual vive são determinantes no desempenho do bezerro nesta fase.
- **PESO AOS 420 DIAS (SOBREANO):**  
O peso ao sobreano é uma característica que não é diretamente influenciada pelos efeitos maternos, representa melhor o ambiente de criação e os genes de efeito direto do animal. É expressa em kg e possui grande importância por ser a última pesagem realizada antes da terminação, deste modo, é o peso mais próximo do peso de abate e que apresenta maiores correlações com este.
- **GANHO MÉDIO DIÁRIO DA DESMAMA AO SOBREANO (GMD):**  
Expressa em kg, a diferença esperada na progenie (DEP) para ganho médio de peso da desmama ao sobreano (GMD) indica o potencial genético do reprodutor em transmitir genes com efeito direto, ou seja genes que são transmitidos e expresso no desenvolvimento da desmama (210 dias) ao sobreano (420 dias). DEP's mais elevadas são indicativas de ótimo desempenho dos filhos nas características avaliadas.

# BASE DE DADOS UTILIZADA

Os números totais de grupos contemporâneos, touros, vacas e produtos, para cada característica avaliada, são apresentados na tabela a seguir.

**Tabela 1: Descrição do arquivo de banco de dados.**

<b>Características Avaliadas</b>	<b>GC's</b>	<b>Touros</b>	<b>Vacas</b>	<b>Informações</b>
<b>Peso aos 120 dias (Maternal)</b>	<b>24</b>	<b>110</b>	<b>548</b>	<b>1311</b>
<b>Peso aos 210 dias (Desmame)</b>	<b>79</b>	<b>167</b>	<b>1153</b>	<b>3470</b>
<b>Peso aos 420 dias (Sobreano)</b>	<b>74</b>	<b>147</b>	<b>797</b>	<b>1540</b>
<b>Ganho Médio Diário da Desmama ao Sobreano (GMD)</b>	<b>74</b>	<b>147</b>	<b>779</b>	<b>1462</b>

O Banco de dados contou com o número de 5089 animais na matriz de parentesco.

## **PROCEDIMENTOS PRÉ-ANÁLISE GENÉTICA**

Antes de procedermos a análise genética, alguns procedimentos foram executados:

- **À CONSISTÊNCIA;**  
Os dados foram recebidos do Instituto Agrônomo do Paraná – IAPAR – e da Associação de Criadores do Purunã – ACP, e foram editorados por meio do software computacional SAS® (Statistical Analysis System) a fim de permitir exploração e confirmação da qualidade das informações que seriam utilizadas na análise genética.
- **AOS GRUPOS CONTEMPORÂNEOS;**  
Os grupos contemporâneos foram formados por animais nascidos na mesma semana, mês e ano, e pertencentes ao mesmo sexo.
- **AO PRÉ-AJUSTAMENTO DOS DADOS.**
  1. **Efeitos Ambientais;**  
Os efeitos ambientais se deram com a formação dos grupos contemporâneos.
  2. **Efeitos Genéticos e Suas Interações com o Ambiente;**  
Efeitos genéticos aditivos maternos e residuais.
  3. **Ajustamento dos pesos;**  
O ajustamento dos pesos foi definido com base nas equações;
- **Para peso ajustado à fase Maternal (120 dias de idade).**

$$P120 = \frac{PM-PN}{ID} * 120 + PN \quad (1)$$

P120 = Peso ao fim da fase materna padronizado para 120 dias;  
PM = Peso observado ao fim da fase materna;  
PN = Peso ao nascimento;  
ID = Idade em dias da fase materna;

- Para peso ajustado à desmama (210 dias de idade).

$$P210 = \frac{PDES\text{M}-PN}{ID} * 120 + PN \quad (2)$$

P210 = Peso à desmama padronizado para 210 dias;  
 PDES\text{M} = Peso observado à desmama;  
 PN = Peso ao nascimento;  
 ID = Idade em dias à desmama;

- Para peso ajustado ao sobreano (420 dias de idade).

$$P420 = \frac{(PS-PDES\text{M})}{(IS-ID)} * 210 + P210 \quad (3)$$

P420 = Peso ao sobreano padronizado para 420 dias;  
 P210 = Peso à desmama padronizado para 210 dias;  
 PS = Peso observado ao sobreano;  
 PDES\text{M} = Peso observado à desmama;  
 IS = Idade em dias ao sobreano;  
 ID = Idade em dias à desmama;

- Ganho Médio Diário da desmama ao sobreano.

$$GMD = \frac{(PS-PDES\text{M})}{(IS-ID)} \quad (4)$$

P420 = Peso ao sobreano padronizado para 420 dias;  
 P210 = Peso à desmama padronizado para 210 dias;  
 PS = Peso observado ao sobreano;  
 PDES\text{M} = Peso observado à desmama;  
 IS = Idade em dias ao sobreano;  
 ID = Idade em dias à desmama;

# METODOLOGIA DA ANÁLISE

- A ANÁLISE GENÉTICA foi realizada em parceria dos pesquisadores da UFPR, Embrapa e IAPAR, através das metodologias e softwares:
  1. SAS® (Statistical Analysis System) para garantir a qualidade das informações, sendo excluídos os valores discrepantes;
  2. A avaliação genética foi realizada com a adoção do Modelo Animal que inclui efeitos genéticos diretos e (co)variáveis. A estimação dos componentes de covariância e dos parâmetros genéticos para as características foram realizadas por meio da metodologia de Inferência Bayesiana, com auxílio do software livre da família BLUPF90 (Misztal *et al.*, 2014), em análises unicaracterística;
  3. O Modelo Animal utilizado foi o completo, considerando-se a matriz de parentesco entre os animais e incluindo-se os efeitos genéticos aditivos diretos, aditivos materno e efeitos fixos de grupo de contemporâneos além da idade da vaca (linear e quadrático).
  4. A convergência das cadeias de Gibbs para distribuições estacionárias foi testada por meio dos testes de diagnóstico de Geweke e de Heidelberger & Welch, disponíveis no CODA (Convergence Diagnosis and Output Analysis), implementado no software livre R.
  5. A base genética para avaliação e geração das DEP's foram determinadas com relação a uma base genética variável, sendo esta a média da população analisada. Desta maneira, os valores das DEP's não são únicos, podendo variar em diferentes avaliações futuras. Sendo totalmente dependente do desempenho do animal e de seus parentescos avaliados, além da média da população no momento da avaliação.
  6. A DEP (diferença espera na progênie) corresponde à metade do valor genético do indivíduo. Neste contexto para melhor entendimento, tomemos dois reprodutores (A e B) com DEP's de 15 e 25 kg para peso ao sobreano, respectivamente. Isto significa que em acasalamento com fêmeas determinadas aleatoriamente. Os touros A e B terão filhos com peso ao sobreano em média de 15 e 25 kg superior à média da população avaliada, e os filhos touro B serão em média 10 kg superiores em relação aos filhos do touro A.
- O MODELO ANIMAL utilizado para avaliação genética para cada característica animal foi:

$$Y = X\beta + Z_1a + Z_2m + \varepsilon \quad (5)$$

Em que:

**Y** é o vetor de observações;

**X** é matriz de incidência dos efeitos fixos;

**$\beta$**  é o vetor de incidência dos efeitos fixos;

**$Z_1$**  é a matriz de incidência dos valores genéticos aditivos;

**$Z_2$**  é a matriz de incidência dos efeitos genéticos maternos no peso ao desmame e desconsiderado no peso ao sobreano;

**a** é o vetor de incidência dos efeitos genéticos aditivos;

**m** é o vetor de incidência dos efeitos genéticos maternos no peso ao desmame e desconsiderado no peso ao sobreano;

**$\varepsilon$**  é o vetor dos erros aleatórios associados às observações do vetor Y.

**Tabela 2: Médias e (desvios padrões) para as características avaliadas no presente sumário de touros da raça Purunã.**

CARACTERÍSTICA	AMBOS	MACHOS	FÊMEAS
PESO AOS 120 DIAS	127,78 Kg (20,58)	127,83 Kg (20,35)	120,00 Kg (20,01)
PESO AOS 210 DIAS	163,57 Kg (36,98)	168,10 Kg (37,60)	159,00 Kg (35,79)
PESO AOS 420 DIAS	266,23 Kg (59,75)	293,50 Kg (63,64)	245,98 Kg (47,33)
GANHO MÉDIO DIÁRIO	362,61 g (193,05)	436,86 g (207,45)	305,28 g (148,43)

Para o ganho médio diário, a distribuição desta característica não atende uma distribuição normal padronizada, assim torna-se imprescindível identificar a mediana da variável que apresentou o valor de **317,52 g**, demonstrando a região que está mais próxima do maior número de animais avaliados para a característica ganho médio diário de peso da desmama ao sobreano.

**Tabela 3: Média das DEP's estimadas para as características avaliadas no sumário da raça Purunã para os 20% melhores índices de qualificação genética para raça Purunã.**

CARACTERÍSTICA	AMBOS	MACHOS	FÊMEAS
PESO AOS 120 DIAS	0,790	0,884	0,716
PESO AOS 210 DIAS	2,958	3,167	2,796
PESO AOS 420 DIAS	2,704	3,065	2,424
GANHO MÉDIO DIÁRIO	1,304	1,545	1,116

**Tabela 4: Estimativas dos parâmetros genéticos e componentes de variâncias para as características avaliadas.**

CARACTERÍSTICA	HERDABILIDADE DIRETA	HERDABILIDADE MATERNA	EFEITO DIRETO	EFEITO MATERNO	VAR. RESIDUAL
PESO AOS 120 DIAS	0,24	0,12	98,394	48,29	263,41
PESO AOS 210 DIAS	0,29	0,18	274,714	174,08	503,82
PESO AOS 420 DIAS	0,15	-	208,507	-	1203,54
GANHO MÉDIO DIÁRIO	0,20	-	418,99	-	1716,39

## COMO INTERPRETAR O SUMÁRIO

- DEP – DIFERENÇA ESPERADA NA PROGÊNIE;

A DEP é a **metade do valor genético** de um animal, visto que cada um dos pais transmite metade do seu potencial genético para sua progênie. É definido como a **diferença esperada no desempenho da futura geração** de um animal, comparada ao desempenho da futura progênie de todos os outros animais avaliados, quando acasalados a animais de mesmo valor genético.

São expressos de forma **negativa ou positiva** em relação a um ponto base (zero). Por exemplo, um touro A pode ter uma DEP de +12 kg para a característica de peso ao sobreano, e um touro B de +5 kg para a mesma característica. Isso deve ser interpretado da seguinte maneira: espera-se que os descendentes do touro A obtenham 7 kg a mais no peso ao sobreano que os descendentes do touro B, se os touros cruzarem com vacas de mesmo valor genético, e forem submetidos às mesmas características de ambiente (temperatura, manejo, nutrição, instalações, entre outras).

Um animal pode ter tantas DEP's quantas forem às características incluídas no programa de avaliação genética, sendo elas **expressas na mesma unidade da característica avaliada**. Por exemplo, para perímetro escrotal ela é expressa em cm, para peso ao ano, em kg.

- BASE GENÉTICA;

As DEP's foram expressas em relação a uma média genética da população analisada. Sendo assim, animais superiores à média apresentam DEP positiva, e animais inferiores à média apresentam DEP negativa.

- ÍNDICES IQG PURUNÃ;

Os índices agregam dentro de um único valor o mérito genético do animal como um todo. Cada característica aplica uma ponderação percentual sobre as DEP's.

**Tabela 5: Descrição dos pesos para as características presentes no Índice de Qualificação Genética do Purunã.**

ÍNDICE DE QUALIFICAÇÃO GENÉTICA	PONDERAÇÃO (%)
Total materno aos 120 dias	15%
DEP para Peso aos 210 dias	25%
Total materno aos 210 dias	20%
DEP Peso aos 420 dias	40%

Para os animais objeto do presente sumário, o Índice de Qualificação Genética do Purunã (IQG/Purunã) foi dado por:

$$\text{IQG/Purunã} = 15\% (\text{TM120}) + 25\% (\text{P210}) + 20\% (\text{TM210}) + 40\% (\text{P420})$$

Em que P210 e P420 são os valores das DEP's para as características Peso aos 210 e 420 dias de idade (Efeito Direto). Para Total Materno (TM120) aos 120 dias e Total Materno (TM210) aos 210 dias de idade, estas são ponderações com base no efeito materno para ambas as características e as suas respectivas DEP's.

Para Total Materno aos 120 dias (TM120), o mesmo deu-se por:  $\frac{1}{2}$  DEP para o efeito direto + total da DEP para o efeito materno.

Para Total Materno aos 210 dias (TM210), o mesmo deu-se por:  $\frac{1}{2}$  DEP para o efeito direto + total da DEP para o efeito materno.

- PERCENTIS;

O percentil é a apresentação dos animais em classes de 1% a 20% obtidas com base no IQG/Purunã. Tem especial importância neste sumário pois permite a visualização rápida e classificação objetiva da DEP de um determinado animal ou touro em relação aos demais animais ou touros analisados. O percentil **TOP 1%** indica que o animal/touro está entre os 1% melhores do rebanho, **TOP 2%** entre os 2% melhores animais e assim sucessivamente até o percentil **TOP 20%**. Com base em suas DEP's respeitando a proporção do IQG/Purunã.

- ACURÁCIA;

A acurácia ou confiabilidade é um valor, que varia de 0 a 1, e mede a associação entre o valor genético predito de um animal/touro e o seu valor genético verdadeiro, sendo assim, quanto mais próximo a 1, melhor é a acurácia. Ou seja, é um indicador de que essa DEP foi bem estimada. A seleção deve ser realizada baseando-se nas DEP's e nos índices e não nas acurácias. As acurácias somente demonstram a intensidade do uso de determinado animal/touro.

Nesta classificação, estão presentes os 20% melhores animais avaliados no **AGPUR 2018**, independente do sexo do animal, desta maneira, todos os animais que apresentam excelente desempenho, sem distinção de sexo (1 para Macho e 2 para Fêmea), estará presente no sumário da raça, agregando valor ao produto animal PURUNÃ.

Sendo descritos pelos títulos da tabela, em que, “Tatuagem” corresponde à identificação do animal no livro de registro, “Touro” são os animais registrados como pai, “Vaca” são os animais registrados como mãe, ambos com pelo menos uma prole no rebanho, “ANO NASC.” é o ano de nascimento do animal presente na coluna tatuagem, “SX” corresponde ao sexo do animal, “DEP” é a Diferença Esperada na Progênie, “Acc” é a acurácia da característica em questão, “DEP GMD g” representa a DEP do Ganho Médio Diário em gramas, “DEP P120 kg” corresponde à DEP para peso aos 120 dias de idade em quilogramas, “DEP MAT. 120” corresponde à DEP para o efeito materno aos 120 dias, “DEP P210” corresponde à DEP para peso aos 210 dias de idade (desmame) em quilogramas, “DEP MAT. 210” corresponde à DEP para o efeito materno aos 210 dias, “DEP P420” corresponde à DEP para peso aos 420 dias de idade e o “IQG” corresponde ao Índice de Qualificação Genética Purunã com a proporção proposta na Tabela 5.

Esta classificação faz referência somente aos 20% melhores **MACHOS** do Rebanho, animais machos pertencentes ao rebanho Purunã, espalhados em todas as propriedades que forneceram dados para a presente avaliação.

Sendo descritos pelos títulos da tabela, em que, “Tatuagem” corresponde à identificação do animal no livro de registro, “Touro” são os animais registrados como pai, “Vaca” são os animais registrados como mãe, ambos com pelo menos uma prole no rebanho, “ANO NASC.” é o ano de nascimento do animal presente na coluna tatuagem, “SX” corresponde ao sexo do animal, “DEP” é a Diferença Esperada na Progênie, “Acc” é a acurácia da característica em questão, “DEP GMD g” representa a DEP do Ganho Médio Diário em gramas, “DEP P120 kg” corresponde à DEP para peso aos 120 dias de idade em quilogramas, “DEP MAT. 120” corresponde à DEP para o efeito materno aos 120 dias, “DEP P210” corresponde à DEP para peso aos 210 dias de idade (desmame) em quilogramas, “DEP MAT. 210” corresponde à DEP para o efeito materno aos 210 dias, “DEP P420” corresponde à DEP para peso aos 420 dias de idade e o “IQG” corresponde ao Índice de Qualificação Genética Purunã com a proporção proposta na Tabela 5.
